

## Science Notebook Process

1. Question: How can you separate the substances in the mixture?

2. Prediction/Plan: Predict the procedure that will work to separate the substances in the mixture. Write a brief explanation of how you will carry out the procedure.

3. Observations: As a group, carry out your plan and record observations and evidence in your notebooks.

4. Explain: (What Have You Learned?) Each group will report your findings backed by evidence. Each student will reflect in your own Science journal (notebook). Consider this as you write:

*How do you know your group separated the mixture successfully? Support your response with evidence.*
